

INTERNSHIP TRAINING PLAN

Internship Program Details

Particulars	Details
Internship Start Date	27th May 2026
Internship End Date	3rd July 2026
Internship Duration	6 Weeks
Project Name	Lead & Product Management System using Django
Leading Project	Rajesh Sachdeva
Reporting Mentor	Mohit Mehta
Department	Technical Department
Database	Microsoft SQL Server (MSSQL)
Project Submission Timeline	During the 4th Week of Internship
Organization	Swast Solutions Private Limited

Project Overview

The internship project focuses on developing a Lead & Product Management System using Django Framework and Microsoft SQL Server (MSSQL). Interns will gain hands-on experience in web application development, database management, REST API development, dashboard creation, reporting, GitHub collaboration, and software development best practices.

The application will enable users to manage Leads, Products, and Regions through a centralized web-based platform.

Team Structure

Team (A – B) Django Development Team

Responsibilities:

- Product Management Module
 - Region Management Module
 - Lead Management Module
-

- REST API Development
- Search Functionality
- Dashboard & Reporting
- MSSQL Database Integration
- GitHub Repository Management
- Project Documentation

Development Approach

Both teams will independently develop the complete Lead & Product Management System using Django and Microsoft SQL Server (MSSQL).

Objectives:

- Encourage healthy competition between teams
- Provide exposure to the complete software development lifecycle
- Improve problem-solving and collaboration skills
- Compare implementation approaches and best practices
- Enhance coding, documentation, and presentation skills

Evaluation Criteria:

- Functionality
- Code Quality
- Database Design
- API Development
- User Interface
- Search Functionality
- Dashboard & Reporting
- Documentation
- GitHub Repository Management
- Team Collaboration
- Project Presentation

Technology Stack

- Python
- Django
- Django REST Framework (DRF)
- Microsoft SQL Server (MSSQL)
- pyodbc
- HTML
- CSS
- Bootstrap
- REST APIs
- Postman
- GitHub

Database Structure

Database Name

Lead Management DB

Tables

Leads

- Lead_ID
- Lead_Name
- Email
- Phone
- Product_ID
- Region_ID
- Status
- Added_Dts

Products

- Product_ID
- Product_Name
- Category
- Added_Dts

SWAST SOLUTIONS PRIVATE LIMITED

Registered Office: 1347, Sector 46, Gurugram, Haryana – 122003

Office Address: 956, 9th Floor, JMD Megapolis, Sector 48, Sohna Road, Gurugram, Haryana - 122018

Phone: +91 9910060396

Email: info@swastsolutions.com

Website: <https://swastsolutions.com/>

Regions

- Region_ID
- Region_Name
- Added_Dts

All CRUD operations will be performed using Django connected with MSSQL.

Internship Training & Development Schedule

Week 1: Django Setup, GitHub & Product Master Development

Duration

27th May 2026 – 5th June 2026

Objectives

- Organization onboarding
- Project overview and requirement discussion
- Python environment setup
- Virtual environment creation
- Django installation and project configuration
- VS Code setup
- GitHub account setup
- GitHub repository creation
- Git workflow introduction
- Microsoft SQL Server setup
- Django-MSSQL connectivity
- Django Models creation
- Database migrations
- Django Admin configuration
- Product Master development
- Product Entry Form creation
- Category field implementation using Dropdown (Select Box)
- Region Master creation

SWAST SOLUTIONS PRIVATE LIMITED

Registered Office: 1347, Sector 46, Gurugram, Haryana – 122003

Office Address: 956, 9th Floor, JMD Megapolis, Sector 48, Sohna Road, Gurugram, Haryana - 122018

Phone: +91 9910060396

Email: info@swastsolutions.com

Website: <https://swastsolutions.com/>

- Bootstrap integration
- CRUD operations for Product and Region Master

Deliverables

- GitHub repository created
- Django project configured
- MSSQL database connected successfully
- Django Models created
- Product Master Form completed
- Region Master Form completed
- Category Dropdown implemented
- Product and Region data stored in MSSQL
- Initial project review completed

Week 2: API Development & Database Integration

Duration

8th June 2026 – 12th June 2026

Objectives

- Introduction to REST APIs
- Django REST Framework (DRF) setup
- API architecture understanding
- API creation for:
 - Leads
 - Products
 - Regions
- MSSQL integration with APIs
- CRUD API implementation
- Serializer creation
- Request and response handling
- API validation
- API testing using Postman
- Requirement understanding and implementation

Deliverables

- Lead API completed
- Product API completed
- Region API completed
- Database integration completed
- Postman Collection created
- API documentation prepared
- Weekly mentor review completed

Week 3: Lead Entry Validation & Search Functionality

Duration

15th June 2026 – 19th June 2026

Objectives

- Lead Entry Form development
- Form validation implementation
- Mandatory field validation
- Duplicate lead validation
- Error handling implementation
- Search functionality development using:
 - Lead ID
 - Lead Name
 - Product
 - Region
- Query optimization
- UI enhancement
- Business rule implementation

Deliverables

- Lead Entry Module completed
- Validation Module completed
- Search Functionality completed

- Error handling implemented
- Weekly progress report submitted
- Mid-project demonstration completed

Week 4: Dashboard, Analytics & Reporting

Duration

22nd June 2026 – 26th June 2026

Objectives

- Dashboard design and development
- Lead Analytics
- Product Analytics
- Region-wise Analytics
- Graph implementation
- Chart implementation
- Data visualization
- Summary reporting
- CSV export functionality
- Excel export functionality
- Project testing
- Performance optimization
- Documentation preparation
- Final project submission

Deliverables

- Dashboard Module completed
- Graphs and Charts completed
- Reporting Module completed
- CSV Export completed
- Excel Export completed
- Final Project Submission
- Project Demonstration

Week 5: Application Enhancement & Professional Exposure

Duration

29th June 2026 – 3rd July 2026

Objectives

- Additional practical assignments and enhancements
- Authentication module implementation (Optional)
- Code optimization and logging
- GitHub repository management
- Team collaboration and code reviews
- Professional communication and reporting practices
- Performance improvement activities

Deliverables

- Enhanced application features
- GitHub project repository
- Task completion reports
- Performance assessment report

Week 6: Final Review & Internship Closure

Objectives

- Final testing and bug fixing
- Project documentation completion
- Final performance review session
- Discussion of learning outcomes and project experience
- CEO Presentation and Live Demonstration
- Internship closure formalities

Deliverables

- Final Internship Evaluation
- CEO Presentation & Live Demo
- Internship Feedback Report

- Completion Documentation
- Internship Certificate Processing

Final Expected Features

The completed application should include:

- Product Master Form
- Region Master Form
- Category Dropdown
- Lead Entry Form
- MSSQL Database Integration
- Product Management
- Region Management
- Search Functionality
- REST API Development
- Dashboard & Analytics
- Graphs & Charts
- CSV Report Export
- Excel Report Export
- Authentication Module (Optional)
- Responsive User Interface
- Error Handling & Validation
- GitHub Repository Management

Daily Status Report (DSR) Format

Date	Intern Name	Task Assigned	Task Completed Today	Status (Completed/In Progress/Pending)	Issues/Blockers	Learning/Remarks
01-Jun-26	John Doe	Create Python venv	Created venv and installed packages	Completed	None	Learned virtual environments

General Guidelines

- Interns are expected to maintain professionalism, discipline, and punctuality throughout the internship period.
- Daily status updates must be submitted to the mentor.
- Weekly progress reviews will be conducted.
- All deliverables must be completed within the defined timelines.
- Regular attendance and active participation are mandatory.
- GitHub repositories must be maintained properly.
- Source code should be committed regularly with proper comments.
- Project documentation must be updated continuously.
- Any blockers or issues must be reported immediately to the mentor.
- Confidential company information must not be shared externally.
- Team collaboration and knowledge sharing are encouraged throughout the internship.

Final Project Presentation

At the end of the internship, interns will demonstrate:

1. Product Management Module
2. Region Management Module
3. Lead Entry Module
4. REST APIs
5. Search Functionality
6. Dashboard & Analytics
7. Graphs & Reporting
8. CSV/Excel Export
9. GitHub Repository
10. Overall System Workflow

The final project will be presented to the Technical Team, Project Lead, Reporting Mentor, and CEO as part of the internship evaluation process.
