

Lead Management System – API Documentation

Overview

This project exposes REST APIs for managing Products, Regions, and Leads using Django REST Framework (DRF). The APIs support CRUD (Create, Read, Update, Delete) operations and exchange data in JSON format.

Product API

1. Get All Products

- **Method:** GET
- **Endpoint:** /api/products/
- **Description:** Retrieves all product records.

2. Create Product

- **Method:** POST
- **Endpoint:** /api/products/
- **Description:** Creates a new product. ProductID, Added_By, and Added_Dts are generated automatically.

Sample Request

```
{  
  "productname": "CRM",  
  "categoryid": 1,  
  "is_active": 1  
}
```

3. Update Product

- **Method:** PUT
- **Endpoint:** /api/products/<productid>/
- **Description:** Updates an existing product.

4. Delete Product

- **Method:** DELETE
- **Endpoint:** /api/products/<productid>/delete/
- **Description:** Deletes the specified product.

Region API

1. Get All Regions

- **Method:** GET
- **Endpoint:** /api/regions/

2. Create Region

- **Method:** POST
- **Endpoint:** /api/regions/

Sample Request

```
{  
  "regionname": "North"  
}
```

3. Update Region

- **Method:** PUT
- **Endpoint:** /api/regions/<regionid>/

4. Delete Region

- **Method:** DELETE
- **Endpoint:** /api/regions/<regionid>/delete/

Lead API

1. Get All Leads

- **Method:** GET
- **Endpoint:** /api/leads/

2. Create Lead

- **Method:** POST
- **Endpoint:** /api/leads/

Sample Request

```
{  
  "personname": "Rahul Sharma",  
  "gender": "Male",  
}
```

```
"companyname": "ABC Pvt Ltd",
"contactno": "9876543210",
"email": "rahul@example.com",
"city": "Delhi",
"state": "Delhi",
"territoryid": 1,
"regionid": 1,
"productid": 1,
"statusid": 1,
"leadsourceid": 1,
"businessneed": "Need CRM Software",
"lead_gen_date": "2026-06-11",
"executiveid": 101
}
```

3. Update Lead

- **Method:** PUT
- **Endpoint:** /api/leads/<leadid>/

4. Delete Lead

- **Method:** DELETE
- **Endpoint:** /api/leads/<leadid>/delete/

Validation

- Product Name: Letters, numbers, and spaces only.
- Region Name: Letters and spaces only.
- Person Name: Letters and spaces only.
- Contact Number: Exactly 10 digits.
- Company Name: Alphanumeric with selected special characters.
- Email: Valid email format.
- City/State: Letters and spaces only.

Response Format

Successful responses follow this structure:

```
{
  "success": true,
  "message": "Operation completed successfully.",
}
```

```
"data": {}  
}
```

Validation failures follow this structure:

```
{  
  "success": false,  
  "message": "Validation failed.",  
  "errors": {}  
}
```

Technologies Used

- Django
- Django REST Framework (DRF)
- Microsoft SQL Server
- Postman
- Python
